

COVID-19 Vaccine Benefit/Risk Form for Individuals Requesting to Receive Additional (Third and/or Fourth) Doses

To enable international travel to countries, agencies (e.g., cruise ship lines) and venues that do not approve of select COVID-19 vaccine series, certain individuals are eligible to receive additional doses of COVID-19 vaccines. Please refer to **Table 1** on the back of this page for recommendations.

The National Advisory Committee on Immunization (NACI) and the Public Health Agency of Canada (PHAC) do not have recommendations to guide Canadian provinces and territories on the administration of a third COVID-19 vaccine dose to individuals who previously received two valid COVID-19 vaccine doses as a mixed vaccine series.

All COVID-19 vaccines licensed by Health Canada are safe and effective, and offer good protection against strains of the virus including the Delta variant. There is preliminary information on the safety of third COVID-19 doses. It is expected that individuals may experience mild to moderate symptoms (e.g., fever, chills, aches, and pain at the injection site) after third and fourth doses.

I understand that my third or fourth dose must be received at least 28 days following the most recent COVID-19 immunization. Additional intervals from other vaccine may apply.

I have read and been fully informed by the health care provider regarding the above information.

I hereby give permission for myself or my child to receive an additional COVID-19 vaccine dose as indicated below.

- Pfizer dose # _____
- Moderna dose # _____
- AstraZeneca dose # _____ (Only available at Public Health; not available in pharmacies)
