Dear Colleagues:

Re: COVID-19 Vaccine Boosters for Children 5-11 Years Old

The Government of Saskatchewan is providing information on booster doses for children five to 11 years old.

Effective August 31, 2022:

 All children five to 11 years old living in Saskatchewan, are eligible to receive a booster dose of Pfizer BioNTech's Comirnaty (10 mcg) a minimum of four months after the last dose in their primary series.

Note: Moderna's Spikevax is not authorized for use as a booster in this age group at this time.

On August 19, 2022, the Pfizer BioNTech Comirnaty (10mcg) COVID-19 vaccine was authorized as a booster dose in children five to 11 years of age.

- The National Advisory Committee on Immunization (NACI) strongly recommends that a booster dose of Pfizer BioNTech Comirnaty (10 mcg) COVID-19 vaccine **should** be offered to children five to 11 years of age with an underlying medical condition that places them at high risk of severe illness due to COVID-19. Examples of such conditions are included in the NACI statement.
- NACI also recommends that in the context of heightened epidemiological risk, a booster dose may be given to all children five to 11 years of age.
- NACI recommends the booster dose be offered at an interval of at least six months since
 completion of the primary series as a longer dose may result in a better immune
 response, however a shorter interval of at least three months may be warranted.

For more information regarding the NACI recommendations see the full statement: https://www.canada.ca/content/dam/phac-aspc/documents/services/immunization/national-advisory-committee-on-immunization-naci/recommendations-use-first-booster-dose-pfizer-biontech-comirnaty-covid-19-vaccine-children-5-11-years.pdf

A parent/legal guardian must be present to provide verbal, informed consent. If the parent chooses an adult designate (e.g. grandparent, aunt) to accompany the child for a vaccine, a <u>consent form</u> signed by the parent/guardian must be presented.

Sincerely,

- Ball
