Dear Colleagues,

Re: Moderna COVID-19 Vaccine to be Reserved for Medically At-Risk Children 6 months to 11 years old.

Effective immediately Saskatchewan's remaining supply of Moderna COVID-19 vaccine will be reserved for children 6 months to 11 years of age who are medically at high-risk of COVID-19 infection. Pfizer COVID-19 vaccine remains available for individuals 12 years of age and older who are eligible for an additional dose of COVID-19 vaccine until June 14, 2025.

The following children are eligible to receive Moderna vaccine to start or complete a primary series or as an additional dose, **until June 14, 2025**:

- **Children 6 months to 11 years of age who are moderately to severely immunocompromised** due to an underlying condition or treatment (refer to <https://www.canada.ca/en/public-health/services/publications/healthy-living/canadian-immunization-guide-part-4-active-vaccines/page-26-covid-19-vaccine.html#a6.4.considerations>).

Additional notes:

- The additional dose is recommended to be given at least 2 months from the child's last COVID-19 dose.
- Moderna supply for individuals aged 6 months and older expires on June 14, 2025.
- A sufficient supply of Pfizer vaccine is available in the province for eligible individuals 12 years of age and older.
- Refer to the *Saskatchewan Immunization Manual* [Chapter 10](#) for age-appropriate COVID-19 vaccines and doses.

Sincerely,

A handwritten signature in black ink, appearing to read "Saqib Shahab".

Dr. Saqib Shahab
Chief Medical Health Officer
