Information Bulletin 0020

Issue:

Recording of Historical HB and HAHB Immunizations

When provided with historical written documentation of a HB or HAHB vaccine that includes the dosage and unit of measure (e.g. 0.5 mL or 1.0 mL), the dosage and unit of measure must be documented in Panorama.

The Panorama forecast for HB and HAHB vaccine dosages and series schedules reflects client specific details such as the client's date of birth, their age when doses were administered, the formulation they received for each dose (e.g., pediatric or adult), and any risk factors.

Inclusion of dosage information in Panorama will facilitate the Forecaster function in determining what type of series schedule and dosage will be forecast for future vaccines.

To enter historical HB or HAHB vaccines that include the dosage and dosage unit of measure (UOM) – e.g. 0.5 mL use the **Add Historical Details** feature.

For additional information see the *Recording Historical Immunizations* policy on the Panorama Gateway.

Versions Affected

Version 2.5.3
