   (Pre-Panorama TB tests & Results will be found under *Imms History Interpretaion*)

3. c/o *Consent Directives*. Provide TB test teaching/screening as usual and record consent for PPD once obtained.

B) Immunization menu

1. c/o *Immunizations*

2. c/o *TB Skin Test Summary*

3. c/o *Create TB Skin Test*

4. Complete *Clinical Information*

Created Jan 28, 2015

Basic Panorama Steps for TB SKIN TEST

5. Scroll down to *Test Given Details* and complete

TB Skin Test Read/Results documentation

6. As usual, 48 to 72 hours later record '*Test Read Details'* on the lower portion of the *TB Skin Test Summary* page. Print *Outcome report* for client.

Panorama Policy states;

Select "unknown" in the Interpreted Result field unless advised by Saskatchewan TB Prevention and Control.

Document the measurement of induration in millimetres (mm) in the Reaction Size field. A measurement should usually be recorded as a whole number. If the measurement falls between demarcations on the ruler that the smaller of the two numbers should be recorded. If No induration, record as 0 mm.

Best practice would be to record an induration of 10 mm or greater at 6-24 hours and at 72-96 hours.

Historical documentation of TB skin test results should also be entered in the Interpreted Result and Reaction Size fields. Historical results must be entered by a nurse. The most recent negative as well as any positive results should be recorded in the Interpreted Result field and if a valid measurement of induration is available record the induration in millimetres (mm) in the Reaction Size field.

If a report is required, the TB Test Outcome Report will be provided. Reminder - the TB Test Outcome Report can only be generated for a TB skin test result that is entered as a non-historical test in Panorama
