## MySaskHealthRecord Surgical Procedures

MySaskHealthRecord (MSHR) gives patients and their families access to provincial laboratory results, medical imaging reports, immunization history, clinical visit history, prescription history and select open clinical documents.

Surgical Procedures information such as date scheduled, location, surgeon and procedure is recorded in the Saskatchewan Surgical Registry. Work is underway to make this information readily available to patients in MSHR. Patients preparing for surgery who have a MSHR account will be better informed about where they are in their surgical journey, from referral to the confirmed surgery date.

### Benefits:

Access to information about upcoming surgical procedures helps patients prepare for appointments, allows them to be more involved in managing their own health care, and reduces uncertainty and anxiety. Health care providers can spend less time answering questions about surgery dates and times, and more time focused on patient care.

### Implementation plan and functionality:

Surgical Procedures functionality and data will be live in March 2024. This includes:

- Waitlist date, scheduled date and procedure
- Email and in-app notifications when information is updated
- Manual and automatic reminders
- Surgical procedure history

**Please note** that surgical procedures information will not be available in the eHR viewer, only in the patient's MSHR account.

### Other information:

The MSHR provider webpage ([ehealthsask.ca/services/MSHR](http://ehealthsask.ca/services/MSHR)) has information and resources for providers. Watch that space for information about the Surgical Procedures function.

**For questions:** Gord Smith, Manager, Citizen Services – [gord.smith@ehealthsask.ca](mailto:gord.smith@ehealthsask.ca).

### What patients are saying:

"Access to the Surgical Procedures in MySaskHealthRecord benefits both my physical and mental well-being. It allows me to be proactive in my health care journey by improving communications with my provider, ensuring my care is progressing, verifying information, and co-ordinating my personal and professional life to accommodate my surgery date."
